

## R.I.P.E. PROGRAM AN ABSTRACT

R.I.P.E. - **Raising Industry Proficient Engineers**, is a one-day training program conducted by R&AC Academy. By design, it is a perfect and seamless complement to the academic learnings for the students of engineering course. It is an awareness program for the fresh mechanical engineers about the process of transforming themselves into contributing professionals, irrespective of the career path chosen by them. In order to make the program learnings effective and long lasting for the students, suitable case studies, certain conceptual level explanations and some very familiar applications from the mechanical engineering field are used in this program. Therefore, this program is designed exclusively for the students from mechanical engineering & its allied branches like automobile, mechatronics, production etc.

## PROGRAM BENEFITS

The students get benefited from the *R.I.P.E.* program in a unique way, by learning, understanding and becoming aware of the following characteristics, which are essential for any professional

- **Understanding the expectations from the job seeker by the job giver**

They need to know these expectations not only to get a job but also to sustain and grow in a job.

- **Knowing about Innovation Process**

Innovation is an important and the most favourite activity of any field. This program makes the students understand where it happens and how it happens.

- **Understanding customer needs**

Without understanding and fulfilling the customer needs, one can't grow in any job. This program uses some classic cases and makes the students understand how engineers typically do this.

- **How to orient theory towards applications**

Engineers can't add value to an organisation with their theoretical knowledge alone. They must orient it towards applications. How to do that, is what the students will learn in this program.

- **Problem Solving Methodology**

Ability to solve problems is the mother of all capabilities to get a job, to grow in a job and also to sustain in a job. Students will learn these techniques along with the common mistakes committed in a problem solving scenario.

- **Performance Assessment Criterion for a professional**

In order to align their performance in right orientation, they first need to know how their performance in any job is measured. They will learn about that process in this program.

- **Knowing about the industry of their choice**

Why do you want to join this job/field etc, is a typical interview question. They must give a very formal and well prepared answer to that question. In this program, the students will learn how they should prepare themselves for that.

- **Developing the habit of being curious**

Curiosity is something that will make and keep the professionals a LIVE WIRE, irrespective of their position and age. Hence, this habit must be built at the earliest possible and this program will become the starting point for the students, towards building that habit.

To sum it up, the students after attending the R.I.P.E. program will complement their academic learnings in order to enhance their market value and prepare themselves to be ready for a successful career of their choice.
